OBJECTIVE

The MultiAsset IP Balanced Defensive Fund is a risk-managed balanced portfolio comprising a range of domestic and foreign asset classes. The fund aims to achieve stable capital appreciation with low volatility. The asset allocation of the fund will be varied according to the manager's view on the macroeconomic outlook as well as the attractiveness of each asset class and may include equities, bonds, money market and property.

DESCRIPTION

The objective of the fund is to achieve returns of at least 2-3% annualised in excess of inflation (CPI) over rolling 2-3 year periods whilst simultaneously controlling the risk of underperforming CPI over any rolling 12 month period. The fund will comply with all prudential requirements and regulations controlling retirement funds or such other applicable legislation as may be determined for retirement funds.

APPLICATION

This fund is suitable for investors with a moderate risk profile and with an investment time horizon of between 2 and 3 years who wish to have their fund managed to a specified real return target with appropriate risk controls. In achieving this objective, the fund applies asset allocation and manager selection disciplines described herein.

FEES

	JSE Code	Annual Management Fee (ex VAT)	TER (%)	TC (%)	TIC (%)	NAV	Units in Issue
Class A	MAICA	0.90%	1.63	0.08	1.71	R 14.65	10 622 812
Class B1	MADB1	0.50%	1.17	0.08	1.25	R 14.69	9 129 035

Annual fee breakdown

	Administration	Asset Management
Class A:	0.15%	0.75% (Altinvest 0.60%)
Class B1:	0.15%	0.35% (Altinvest 0.20%)

The Total Expense Ratio (TER) of the value of the financial product was incurred as expenses relating to the administration of the financial product. The Transaction Cost (TC) of the value of the financial product was incurred as costs relating to the buying and selling of underlying assets within the financial product. Total Investment Charges (TIC) of the value of the financial product was incurred as costs relating to the investment of the financial product. The TER, TC and TIC figures are inclusive of VAT. The period (annualised) was from 1 July 2021 to 30 June 2024.

A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER.

INVESTMENT PROCESS

MultiAsset's primary tenet is to construct a range of target return portfolios that, individually or combined, allow the investor the greatest opportunity to attain their financial goals. Selecting the right asset manager and implementing an appropriate asset allocation forms the basis of our philosophy.

Selecting the Managers

MultiAsset has identified four key criteria that define a manager's unique DNA:

- * Beta - sensitivity of investment returns to changes in market returns
- * Alpha - extent to which a fund has outperformed the sector average
- * Win-loss ratio - ratio of "winning trades" (positive returns) to "losing trades" (negative returns)
- * Recovery-drawdown ratio - ratio of recovery time following maximum drawdown performance to previous peak

With the intimate understanding of each manager's unique "DNA", we are able to capture individual manager excellence and combine them synergistically.

Selecting an Appropriate Asset allocation

- * Understanding the risk and diversification attributes of each asset class in relation to the investment objective and time horizon forms the foundation.
- * An active tactical asset allocation overlay ensures that the fund is tilted to take cognizance of the global macro environment

FUND MANAGEMENT EXPERIENCE

Tony Bell
BCOM (Hons), MBA
Portfolio Manager
ThinkCell

Having started out as an accountant, Tony moved to Southern Life Asset Management and soon became assistant General Manager of Investments. His move to Syfrets Managed Assets created the opportunity for Tony to become Chief Investment Officer at Nedcor Investment Bank. As the former CIO of PeregrineQuant and Vunani Fund Managers (VFM), and more recently, the CIO of Thinkcell, Tony brings a wealth of experience especially in running the overall asset allocation of the fund. His MBA thesis "Portfolio Management - an Alternative Approach" which was awarded with distinction reflects Tony's interest in understanding how the macro environment affects markets and asset class returns.

Collective Investment Schemes are generally medium to long term investments. The value of participatory interests or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available on request from the manager. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The Manager retains full legal responsibility for the Fund, regardless of Co-Naming arrangements. Transaction cutoff time is 14:30 daily. Each portfolio may be closed for new investments. Valuation time is 15:00 (17h00 at quarter end). Prices are published daily and available in newspapers countrywide, as well as on request from the Manager. IP Management Company (RF) Pty Ltd is the authorised Manager of the Scheme contact 021 673 1340 or clientservices@ipmc.co.za. Standard Bank is the trustee / custodian - contact compliance - IP@standardbank.co.za. Additional information including application forms, the annual report of the Manager and detailed holdings of the portfolio as at the last quarter end are available, free of charge, from clientservices@ipmc.co.za. IP Management Company is a member of ASISA. A statement of changes in the composition of the portfolio during the reporting period is available on request. The performance is calculated for the portfolio. The individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The fund is invested in portfolios of collective investment schemes that levy their own charges, and which could result in a higher fee structure for the fund. Kindly direct all complaints to complaints@ipmc.co.za.

ASSET ALLOCATION

Asset allocation is based on the latest available holdings data from Morningstar.

PERFORMANCE

■ Multi Asset IP Balanced Defensive A Fund ■ Benchmark

Highest annual return** (Rolling Maximum) 18.9%

Lowest annual return** (Rolling Minimum) -0.9%

* Returns are annualised if period is longer than 12 months.

Annualised returns is the weighted average compound growth rate over the performance period measured. Fund returns shown are based on NAV-NAV unit pricings calculated from Morningstar for a lump-sum investment with income distribution reinvested (after fees and cost).

**The highest and lowest annual returns are based on rolling 1 year returns with 1 month steps.

INVESTMENT COMMENTARY

In our report last month, we reviewed the degree to which the US Federal Reserve was too restrictive in its monetary policy. It should have come as no surprise that the Fed cut by 50 bp at its September meeting and will probably cut by another 25 bp in November before entering a holding period. Whether these cuts will be enough to stave off a recession in 2025 has evoked a great deal of debate. The "no-recession" proponents point to the strength of the labour market, healthy consumer spending, low inflation forecasts, high real yields, and continued productivity gains from technological innovation and capital investment in the US. Conversely, the "pro-recession" camp highlights the lagged effect of monetary policy on the broader economy, some softening of the jobs market, and the decline in personal savings as potential precursors of future consumer expenditure. The latest escalation in conflict in the Middle East has the potential to unsettle volatility, strengthen the dollar, and increase oil prices. Any supply-side shock of this nature could further alter the market's current expectation of low inflation and sustained growth for the US in 2025. Our base case for the year ahead is that the US maintains a positive growth path, US inflation surprises to the upside, and interest rates don't decline as much as expected. The wildcard in the mix is the extent to which China stimulated fiscally as well as monetarily.

An analysis of factors affecting the adherence to the policy objective is contained in the fund manager commentary together with performance as reported. A detailed listing of changes from the previous quarter is available on request from info@miplan.co.za or clientservices@ipmc.co.za.
